

# EVERYTHING YOU NEED TO SERVE THE NEEDS OF YOUR COMMUNITIES

Juno Health's modern, cloud-based public health solution is designed with the end user in mind. With unprecedented, system-wide customization capabilities that are governed at the organizational level, Juno EHR for Public Health allows you to navigate your unique challenges without vendor dependence. With our easy-to-use personalization tools, you can create smarter workflows, eliminate duplicative tasks, and streamline documentation, while ensuring regulatory compliance.

Our modern, ONC certified EHR is designed with HL7 FHIR APIs as a starting point—not a retrofit. It is USCDI compliant and supports true interoperability to allow you to seamlessly work with other agencies and interface with outside labs.

With our single tenant deployment, you are not tied to other organizations. And Juno EHR for Public Health's codified data for reporting allows you to monitor population health, track immunizations, and demonstrate compliance, while supporting your higher mission of caring for your community.

# THE JUNO EHR FOR PUBLIC HEALTH DIFFERENCE

These powerful, intuitive features are designed to make it easier and more efficient for you to provide excellent care and achieve better patient outcomes.

## CLINICAL CONTENT BUILDER

Juno EHR's Clinical Content Builder lets organizations personalize workflows, notes, and assessments for specific facilities, departments, or roles. Its graphical interface and drag-and-drop functionality make customization simple, avoiding the need for coding, extra budget, or delays.

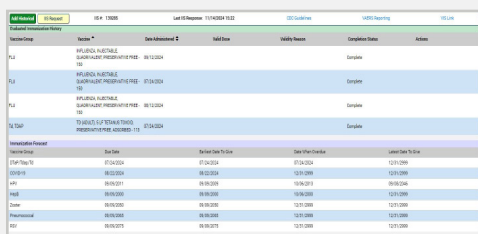

## NATIVE E-PRESCRIBING

Juno EHR's e-Prescribing is a versatile, web-based solution for various care settings, including small clinics. Its customizable options support controlled substance prescribing with two-factor authentication and real-time drug data from First Data Bank, and it is certified by ONC, DEA, and Surescripts for secure electronic transmissions.

## AMBULATORY SCHEDULING

This application streamlines workflows with minimal clicks and offers a user-friendly interface for visualizing appointments. It incorporates patient preferences, facilitates follow-up scheduling during checkout, manages patient movement, and accommodates walk-in appointments. It simplifies patient tracking through an easy check-in and check-out process and captures key metrics to help identify trends and optimize services.

## IMMUNIZATION SERVICES

With Juno EHR's Immunization Services application, immunizations are administered in the eMAR, so users can view history and forecasts from registry queries. The summary enables adding historical data and saves queried recommendations to the patient record, while documenting recommendations and administration for the current encounter.
