IS YOUR TECH TANKING INNOVATION?

With most EHRs, you're stuck. Stuck in the past with legacy technology. Stuck putting out fires instead of driving innovation. Stuck waiting for changes to be made by the vendor. And stuck with substantial costs once those changes are made.

EHR WORKFLOWS SHOULDN'T CREATE MORE WORK FOR YOU

Most EHRs create frustrating challenges for today's IT personnel. The EHR's workflows don't meet clinicians' needs, so you end up balancing a myriad of requests on a daily basis, trying to be in multiple places at once. Instead of focusing on the future and moving your organization forward, you spend your time managing your EHR's shortcomings.

- Constant updates and changes that require your attention
- Over reliance on vendor involvement
- Having to decide which important changes won't get made

SETTLING FOR THE STATUS QUO

The shortcomings of traditional EHRs aren't just inconvenient. They have tangible, negative impacts on your ability to deliver an effective technology solution and top-level security while staying within budget.

- Undependable vendor support leads to long ticket resolution time
- Granting third party access puts your system at risk
- Expensive off-site customization eats into budget

EHRs WERE SUPPOSED TO REVOLUTIONIZE CARE. WHAT HAPPENED?

92%
of doctors say inefficient EHR systems negatively impact quality of care*

58%
of doctors cite document burden as their greatest cause of burnout**

63%
of doctors say time-consuming, burdensome reporting systems are their biggest pain point*

*   Joe Corkery, MD, "Physicians say better data interoperability will save lives," Google Cloud, July 20, 2021

** Dennis Thompson, "Almost Two-Thirds of U.S. Doctors, Nurses Feel Burnt Out at Work: Poll," US News & World Report, February 23, 2023

IT DOESN'T HAVE TO BE THIS WAY.

IT'S TIME TO TURN A NEW PAGE →

INTRODUCING THE
CLINICAL CONTENT BUILDER

With **Juno EHR's** Clinical Content Builder you can empower clinicians to make changes to their own workflows on-site, in real-time, without your involvement. It's just the beginning of the flexibility offered by Juno EHR.

The **Clinical Content Builder** is a collection of tools within Juno EHR that allows you to build and personalize custom Flowsheets, Note Templates, and Modules. This means you can easily create workflows from scratch or make adjustments to existing workflows to meet your needs.

THE PERKS OF PERSONALIZATION

Clinical Content Builder encourages clinicians to make the system work the way they do. With simple drag and drop functionality and a graphical interface, it no longer takes an expert to create personalized workflows. And when a new need arises, you can address it without spending budget, experiencing down time, or waiting for changes to be made by a vendor.

GET CONTROL BACK

Stop being dependent on the vendor for every change and update and limit third-party access to your system.
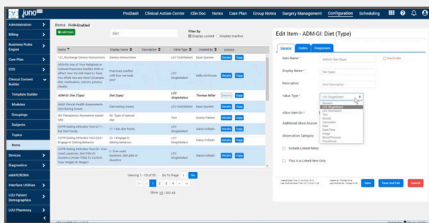

INNOVATE NOW, NOT LATER

Changes can be made in-house and in real-time, so you no longer have to decide which updates you have time and budget for.

ROLE BASED SECURITY

You determine who gets access and permissions based on facility, role, and user.

CLINICAL CONTENT BUILDER

Ready to see how Juno EHR's Clinical Content Builder lets you personalize clinical workflows to transform your organization, make your job easier, and give you more time to focus on innovation?
